Amoxicillin - PO in mg	50 mg BID (gave here in cheese/pb)	50 mg given here	50 mg given here	50mg BID amoxicillin	50mg BID amoxicillin given at home		-
NOTES		Great energy, eating chicken and rice at home. Drinking. Pooped this am (unsure of quality of poop!) playing with toys. No fluids needed, will recheck tonight and possibly to fluids to get through until monday but owners will only need to do oral meds at home on Sunday.	Asked again about this morning's poop-- stated that it was normal not diarrhea. owners will give mtz and amoxi BID tomorrow and return 11am Monday for SID recheck	At home was lethargic. Still walking around but seemed weak and dizzy, slightly off balance. Vomited yesterday but not today but seems nauseous. Normal stool yesterday, peed a lot. Not eating much, not drinking (o tried feeding pedialyte w/ straw but explained risk of aspiration). In exam room, BAR and wagging tail (owners said she was not like this 5 minutes ago!). Got all meds yesterday, MTZ this am but couldn't get amoxi in her. will try again when they get home. Told them SID treatments were okay	eating rice and chicken at home, ate medications in peanut butter and cheese, No vomiting or diarrhea per owners, energy level is high per owners. Owners will return on thursday for final check. Looks great. Discussed spaying when she is better.		Owners called today to say they were unable to/forget to bring in April yesterday. They will bring her in today between 12-4pm.
		No vaccines. Not eating or drinking today. Vomited yesterday but not today. Possibly had watery diarrhea (no blood) yesterday (o believed it was vomit, now unsure). Very reactive to needles. Will give some fluids today but encouraged o to get pedialyte to prevent dehydration so we can stop SQF ASAP.	Owners emailed Sunday night to say April not eating or drinking, seems weak and dizzy. Suggested coming in earlier tomorrow am.				On last day of antibiotics, owners were advised to finish up the course. April looks great, per owners, has been eating and drinking, no vomiting, some soft stools. Owners made an appt to come in for vaccines on July 27, are still thinking about the spay package, will email us if they decide to switch over to the spay package for vaccines. Advised owners to start switching her over to regular diet from chicken and rice slowly
