NOTES

No vax ever. 3 days ago started vomiting, laying down and more lethargic. Not eating or drinking. Owner has her puppies at home 4 of 8 have died, still has 2 in the home. Has brother at home as well. Told owner to keep eye on his other dogs- as soon as they show signs, bring them in. He will also talk to neighbors that play with Cali about potential that their dogs are infected.

Vomiting since yesterday, no diarrhea. Got up to walk around this AM but she may have just needed to go to the bathroom. Not eating or drinking. Will bring in puppies in the PM- they are not eating, having diarrhea

Vomited more at home, small amount of diarrhea. Walking around more than yesterday. Drank water in the exam room.

vomiting, not drinking, not eating, possibly bloody diarrhea. All dogs being kept together, difficult to attribute specific losses to specific animals.

More energy. More alert. Standing, not laying down drowsy. Not drinking but not offered water. Not eating. -v/-d.

Vomited in the car on the way here. Eyes still teary. O says had watery diarrhea. Smelling food and licking but not eating. Male dog at home (brother and father of puppies) starting to vomit. Slightly decreased appetite but that has been ~3 wks. Suspect stress of puppies or possibly fighting off virus. O will monitor, if goes downhill will bring tonight. Otherwise recommended continue feeding wet food/chicken and rice and keeping hydrated. Owner cannot come in tonight so gave owner written instructions to give Cali the following at home tonight and BID on Sunday: Amoxicillin capsules 250 mg, Metronidazole tablets. Labeled pill bottles 1 and 2 and told owner to keep track of ability to give pills (may need to pill her, showed him how here)

Much brighter. vomited in car on way here but otherwise owner unsure if any v/d. Eating chicken and rice. O able to give pills at home in hot dog. Walking around, wagging tail. Instructed to return tomorrow AM for recheck, call if probs.

No vomiting or diarrhea, brighter per owner. Eating and drinking. Looks great, owner to return on Thursday for final recheck.

No vomiting or diarrhea. Lots of energy. Eating well.
